easinet™ residential – PAC management software (from version 5.3.0 onwards)

easinet™ residential is designed to support residential deployments with customer focussed features and a dedicated User Interface for configuring and maintaining security through electronic access and building controls to single location or multi-site residential estates.

- Comprehensive access control management by operators for keyholders, residents and your estates.
- Simple building management including lift control, monitoring / controlling 3rd party equipment, and operator-friendly alarm management via Control Centre.
- IT friendly deployment onto Windows based servers utilising Microsoft AD, web browser access and more.
