Release Notes

PAC Access Central 5.4.12

Technical Support: **T:** +44 (0)161 4063400 opt. 2   **E:** pacgdxsupport@comelit-pac.co.uk

New Features

Intrusion System Arm/Disarm Integration Feature – It's now possible to allow users to arm or disarm a connected intrusion system through a PAC PIN & PROX reader.

- Simplifies your security by allowing the building lock or unlock process to be via a single user action.
- Flexibility is offered via a configured PIN code only or via a validated credential read & PIN code.

Feature Enhancements

- Occupancy Tracking – New standardised Event to Action added to the Occupancy Tracking feature that provides a customer delivered action to an area nearing its set occupancy limit.
- Guard Tour – Has now been expanded to allow individual readers to be guard points in addition to areas.
- PAC OPS Mobile ID Keyholder Management Enhancement – Simpler credential management within the keyholder management menu. The PAC OPS Mobile ID is fully integrated into the keyholder menu for ease of configuration and management.
- Active Directory synchronisation – Now there is an option available to disable keys if the AD record is disabled or deleted.
- Import Tool improvement – Wiegand token format and PAC tokens in decimal format are now supported.

Bug Fixes since 5.3.16

- 252945 Event Manager stops working when firing an input for a Muster.
- 252946 Muster write Report to a file location doesn't work.
- 268729 PIN Duress failed to report as an alarm.
- 272117 GS3 readers fail to reader on voltages above 25.5V.
- 272187 512 DCi losing communication if subnet gateway set as device gateway.
