Access Central™

Release Notes

Technical Support:	T: +44 (0)1707 377203	E: pacgdxsupport@comelit-pac.co.uk

This document covers all releases from 5.5.28 to 5.6.16

Version 5.6.16

New Features

PAC Lock support

- PAC Lock offers a new offline handle, cylinder and cabinet lock to the PAC range. These devices are configured as offline devices using OSS standards. During the install you will be asked to create a new system password for connecting remote offline lock engines for example on clients.

Comelit CCTV AI analytics support

- Support for Comelit CCTV cameras to write AI analytic events to the Access Central event log.
- These events are generated by the camera and can be used to trigger Event to Actions, which gives an extra layer of control of the system.

New Dashboard

- Based on customer feedback, a new smart dashboard has been added manage the system via smart workflows, instead of the advanced user interface, to simplify the day to day operation of the system.

Installer improvements

- Client installs have been improved and there is better connectivity to the Server via DNS.
  If the client cannot see their server one of the following can be tried:
  - Use the IP address of the Server.
  - Add an entry to your client hosts file for the server.
  - Add an A Record for the server on the DNS server.

Feature Enhancements

- Crystal reports version upgrade to 13.0.4000.0.
- Active directory will synchronise initials as part of the matching algorithm.
- New installs are shipped with SQL Server Express 2022 and the minimum support version is SQL 2016 SP3.
- Key colours supported by API.

Bug Fixes

- Key login on a client fixed.
- Issue restoring archive events when running a report.
- Muster can now generate an email and write a local file at the same time.
- Wiegand 2601 format displays correctly as decimal and hexadecimal.
